Utilizing Networks

Corresponding Material
   Digital Citizenship & Cyber Hygiene, Lesson 8- Project: Public Service Announcement

Discussion
   For this project, you will pick a topic discussed in this module to research further and create a Public Service Announcement (PSA) to teach your peers about the chosen topic. The internet can be a very useful tool when researching a topic because it holds many articles, videos, and publications. Even past this, the internet provides a great way to communicate and collaborate with people all around the world, which can give you many different and helpful insights.

Class Exercise
   Use the social network given by your teacher to:
   - Have conversations with others about your chosen topic
   - Ask questions
   - Access differing viewpoints
   - Gain insight from others

   After using the network as a means of research, reflect on this method by answering the following questions.

   1. How easy was it to find others that had information about your given topic?

   2. Were there any other types of people that would have been helpful to communicate with? How could you have connected with them?

   3. What was the most interesting thing you found about your topic? Where did this information come from?

   4. Why do you think engaging with others while doing research is important? Do you think it is equally, less, or more important than finding sources, such as articles or videos?
